

Happy Earth Association

Training and Awareness Sessions Report

Date of Issue: 29/07/2026

Executive Summary :

Happy Earth Association continues to implement training and awareness programs to strengthen the capacities of its staff and volunteers while promoting public health awareness within the community. The activities included specialized training sessions, health awareness lectures, and field visits for data collection, with the program continuing to expand in response to community needs.

Implemented Training Programs :

During the current implementation period, the Association conducted several training programs, including:

- A two-day Health Awareness Training.
- Gender-Based Violence (GBV) Training.
- First Aid Training.
- Health Surveillance Training.

In addition, the Association carried out field visits across several neighborhoods to conduct surveys on chronic and communicable diseases, supporting community

health monitoring and needs assessment.

Awareness Lectures :

The Association also organized several public health awareness lectures, including:

" -The Risks of Sun Exposure During Summer and Heat Stroke Prevention and Management," delivered by Dr. Hevin Mohammed.

" -Misuse of Antibiotics in Children: Risks and Prevention," delivered by Pharmacist Younis Al-Younis and Pharmacist Aya Ibrahim.

Continuity and Development :

Happy Earth Association remains committed to continuously delivering training programs and awareness activities while expanding their scope and improving their quality. These efforts aim to strengthen volunteer capacities, increase public health awareness, and contribute to healthier and more resilient communities through continuous education.

Key Achievements :

The training programs and awareness activities implemented by Happy Earth Association contributed to several key achievements, including:

- Strengthening the capacities of staff and volunteers through specialized training.
- Increasing public awareness of important health issues.
- Conducting field visits and community surveys to support health surveillance and identify community needs.
- Strengthening collaboration with physicians, pharmacists, and healthcare professionals in delivering awareness activities.
- Promoting a culture of prevention and community health awareness.

Recommendations :

- Continue implementing training programs and awareness sessions on a regular basis.
- Expand training topics to cover additional health and humanitarian issues.
- Encourage greater participation of community members, especially women and youth.
- Strengthen partnerships with healthcare institutions and academic organizations to ensure program sustainability.
- Utilize field survey findings to design community-based health initiatives that address local needs.

Conclusion :

Happy Earth Association remains committed to continuing its training programs and awareness activities as a core component of its mission to promote community health and strengthen the capacities of staff and volunteers. The Association will continue to expand and improve these initiatives to increase health awareness, encourage disease prevention, and create a sustainable positive impact within the community.
